

Microsoft at Sibos Bank on intelligence

The future of financial services is being shaped by AI. As financial institutions balance growth, resilience, security, and evolving customer expectations, AI is creating new opportunities to transform operations, modernize payments and capital markets, strengthen risk management, and unlock new sources of value.

Join Microsoft at Sibos to explore how organizations are moving beyond experimentation to deliver measurable business impact with AI, data, and cloud technologies while building the trust, security, and compliance needed to thrive in a rapidly changing industry.

Discover how [Microsoft for Financial Services](#) addresses industry priorities across payments, trade, securities, compliance, and resilience. Join me at the event and learn actionable ways to:

- **Modernize core banking and payments.** Apply intelligence grounded in your market data, your banking operations, and your institutional knowledge—so banks operate at the speed of digital finance.
- **Strengthen risk management and compliance.** Power every risk and compliance decision through an agentic platform that is governed, observable, and designed to meet regulatory demands.
- **Empower relationship managers.** Deepen every client relationship with agentic AI that learns your book of business and compounds your bankers' advantage.
