INTEGRATIVE SCIENCE SYMPOSIUM

8:30 – 10:50 | Hall F2

(8:30 AM – 10:50 AM)

The Science of Successful Aging

Given the rapidly aging populations of both Eastern and Western societies, it is crucial to understand how to promote and preserve important social and cognitive functions so that older adults can lead independent, self-fulfilling lives. From examining links between changing brain structure and cognitive function to exploring the role of social relationships in the lives of older adults, this symposium addresses different levels of investigation and diverse research methods aimed at supporting successful aging.

CHAIR: Corinna E. Loeckenhoff

Department of Human Development, Cornell University, USA

PRESENTATIONS

INTEGRATIVE SCIENCE SYMPOSIUM

8:30 – 10:50 | Hall F1

(8:30 AM – 10:50 AM)

Who's In, Who's Out? Loneliness, Exclusion, and Integration

Loneliness may be a fundamental part of the human condition, but scientists have only recently begun exploring its causes and consequences. A panel of researchers representing the fields of psychology, medicine, and anthropology will share data from diverse nations and cultures on the psychological effects of loneliness, exclusion, and integration. The discussion will explore these implications from biological, economic, social, and ecological perspectives.

WORKSHOP

11:00 – 12:20 | Hall N1
(11:00 AM – 12:20 PM)

Navigating the Academic Life: Open Discussion With Early Career Scholars

Taciano L. Milfont

School of Psychology, Victoria University of Wellington, New Zealand

The transition from a Ph.D. or Post-Doc position into an academic job is not always straightforward. Beginning an academic career frequently involves marketing your teaching/research expertise in distinct ways to secure a job and relocating to another place. It certainly requires learning (ambiguous) norms and rules, balancing time pressures, and making strategic decisions about your focus on teaching and research. In this workshop, I first give an overview of my career and then discuss how to succeed in the academic world. My advice is based on my own experiences and strategies having navigated the academic life (so far), as well as strategies I have observed in others from first academic positions to professors.

WORKSHOP

11:00 – 12:20 | Hall M2
(11:00 AM – 12:20 PM)

Age Differences in Time Perception: Translating Findings From Lab to Life

Corinna E. Loeckenhoff

Department of Human Development, Cornell University, USA

Perceptions of time play a key role in reconstructing the past, anticipating the future, and navigating important life decisions. Therefore, they are a crucial element in understanding and promoting successful aging. After providing an overview of age-related shifts in different aspects of time perception, this workshop will offer examples of how such concepts can be investigated along the translational continuum from focused lab studies to clinical contexts. Interactive components will guide participants in integrating related ideas into their own research.

FRIDAY

WORKSHOP

Longitudinal Research on Immigrant Youth Adaptation: Theory, Methods, and Challenges

Frosso Motti-Stefanidi

Department of Psychology, University of Athens, Greece

Jens B. Asendorpf

Institut für Psychologie, Humboldt-Universität Berlin, Germany

This workshop will examine methods, strategies, and challenges in conducting longitudinal research on immigrant youth adaptation, development, and acculturation. It will focus on (a) how to use a theoretical framework to guide the selection of research questions and variables; (b) how to efficiently carry out data collection; and (c) strategies of statistical analysis, including matching of different cohorts, multilevel analyses of longitudinal changes, and quasi-causal analyses (cross-lagged regression models). The Athena Studies of Resilient Adaptation (AStra) longitudinal project will be introduced for illustration. The audience will have opportunities to discuss these issues in relation to their own projects.

12:30 – 13:50 | Hall N1
(12:30 PM – 1:50 PM)**The Practicalities of Open Science, Open Data & Replication: Responses From Researchers, Journal Editors, and Publishers**

Researcher expectations of what constitutes good science and good scientific reporting continue to undergo unprecedented change, as the opportunities created by rapid technological advances in digital publishing and data management continue to expand. In this session, Routledge invites four speakers, including journal editors, to reflect on the practical challenges they have encountered when implementing or adopting change, focussing in particular on open science badges, open data, pre-registration and registered reports and in peer review.

INTEGRATIVE SCIENCE SYMPOSIUM

14:00 – 16:20 | Hall F1

(2:00 PM – 4:20 PM)

Bridging the Lab and the Real World

Researchers have long debated the extent to which discoveries from controlled experiments can be generalized into the field. This symposium brings together researchers whose work bridges the divide between tightly controlled experimental paradigms and the study of behavior and brain function in the real world. The speakers will discuss the theoretical and methodological implications of research on spatial cognition in virtual environments; the use of eye tracking in real life contexts to understand the relationship between human gaze and locomotion; the examination of gesture as a core component of everyday language use; and attentional processes in complex natural environments.

Our Social Brain: Neurobiology of Human Interactions

What makes the human mind special? Where do human identities, values, preferences, and emotion come from? What capacities underlie moral reasoning, empathy, and altruism as well as the darker sides of human nature? This symposium show how researchers using neuroscientific approaches contribute insights and answers to these fundamental questions about the nature of our minds and human sociality.

WORKSHOP

16:30 – 17:50 | Hall M2
(4:30 PM – 5:50 PM)

How to Study the Human Social Brain

Rebecca Saxe

Department of Brain and Cognitive Sciences,
Massachusetts Institute of Technology, USA

In this workshop, we will consider how functional neuroimaging can be used to answer fundamental questions about the human social brain. We will also consider when neuroimaging opens up new questions, and when to treat results and interpretations of neuroimaging data with extra caution.

Video uniquely captures the richness and complexity of behavior—where people look, what they say, and what they do. This workshop will teach researchers how to mine the richness of behavior by coding, sharing, and reusing research videos with Datavyu, a free video-coding tool, and Databrary, a free Web-based library for sharing videos.

Can Big Data provide a different perspective on Language Competence?

The question of how far one can go in explaining language using only the statistics embedded in the language data has been debated for many years within Linguistics, Psychology and Neuroscience. Recent developments in computational modelling (e.g., deep learning) and the availability of very large corpora of language, behavioral and imaging data bring a new perspective to this question. Two world-leading researchers at the cutting edge of Machine Learning/Computational Linguistics, Marco Baroni and Edward Grefenstette, will describe and provide a critical evaluation of current models that do not rely on linguistic structure. Their presentations will be followed by presentations by two other world-renowned scholars, W. Tecumseh Fitch and Ina Bornkessel-Schlesewsky, who will discuss implications and alternative viewpoints.

Getting Your Paper Published: What You Need to Know

Jennifer A. Franklin, Elsevier

Academic publishing can be daunting for researchers starting their careers. There are important steps that, as an author, you can follow in preparing your manuscript for a successful publication. Experts from across psychology and a publisher from Elsevier (one of the largest academic publishers in Europe) will lead a workshop, sharing their experience as authors and editors, and will be on hand to answer any questions you may have about getting your paper published.

This event is open to all ICPS attendees.

KEYNOTE ADDRESS

19:00 – 20:00 | Hall E
(7:00 PM – 8:00 PM)

How Infants Break Into Language

Linda B. Smith

Department of Psychological and Brain Sciences, Indiana University
Bloomington, USA

The objects labeled by common nouns are so readily recognized and their names so readily learned by infants that some have suggested that these basic-level categories visually ‘carve nature at its joints.’ This idea is at odds with the computational complexity of visual object recognition as understood in human and machine vision. Evidence from the regularities in the infant visual world (collected via head cameras) suggests properties that may not quite “carve nature at its joints,” but may make those joints—and nameable object categories—very easy to find.
